

# Fairbanks & Brandon Hall T Stop Consolidation

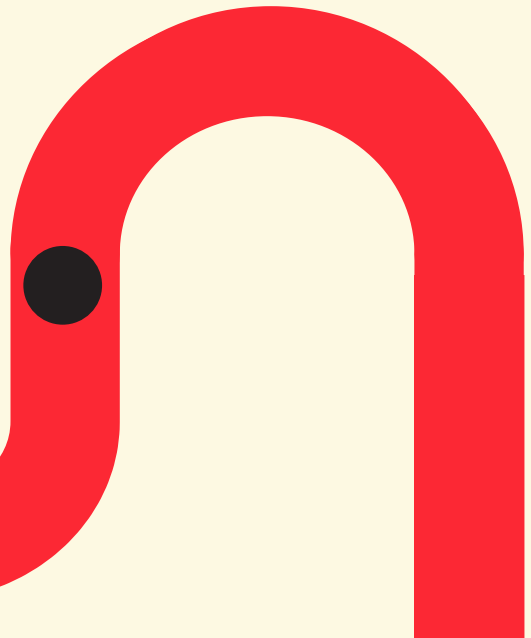

# Introduction

The MBTA has been working to improve the Green C Line for some time.

The C Branch stations currently have several barriers to accessibility:

- Platforms are not at an accessible height for boarding.
- Significant barriers exist for riders with disabilities and riders using wheeled mobility devices.

The proposed upgrades will support efforts to ensure equity across the system by making the stations fully accessible to people with disabilities or limited mobility.

7

## Pros & Cons of New Location

| Pros  | Cons   |
|---|--|
| Ramps No Stairs   | Location: Hill to climb if going west after getting off train. |
| Raised Platforms: Easy access to train with mobility devices & carts. | No traffic light to assure safety crossing Beacon Street.      |
| Halfway between the 2 current stops.                                  |  |

# Meeting

## Public Meeting | Green Line C Branch Accessibility Improvements (Hybrid)

Wednesday, January 15, 2025

Join us to learn about planned accessibility improvements for seven Green Line C Branch stations along Beacon Street in Brookline.

The Green Line is the oldest light rail in the country, and these updates will help modernize it. The project follows guidelines to make public transportation accessible for all and to improve the overall MBTA rider experience.

At this meeting, we will discuss what will be updated, like making platforms higher for easier boarding, adding ramps, improving lighting, and installing clearer signs. These changes will make boarding faster and more comfortable, improve station access, and create a safer environment for all riders. We will also discuss the project's ongoing public review process and community engagement strategies.
